YouGov Poll: August 18 - 22, 2022

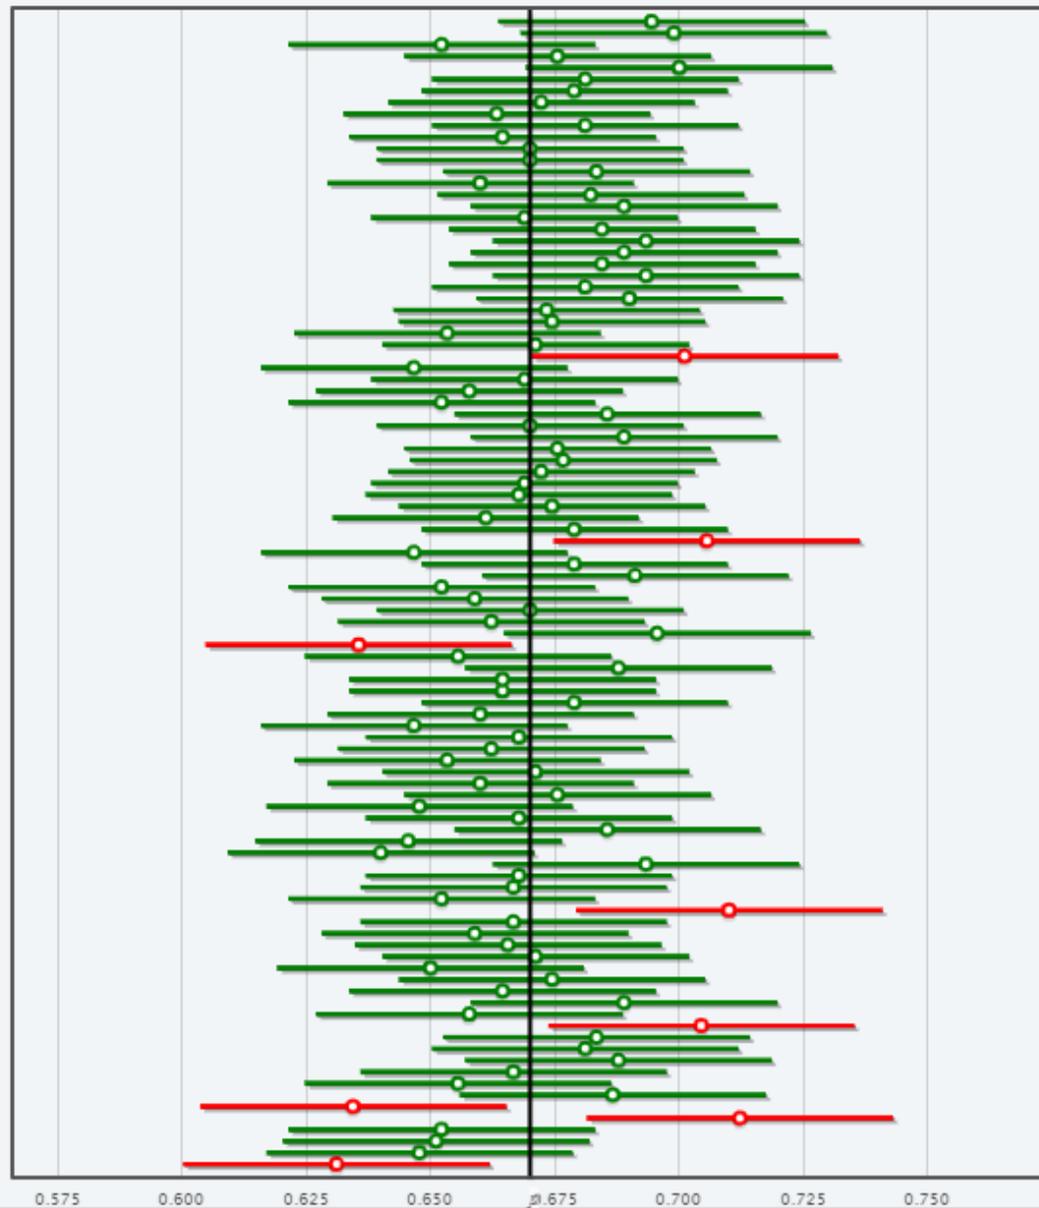

A YouGov [poll](#) released this week asked 1,000 adult Americans whether they hold 20 beliefs loosely defined as "new-age spiritualism." The survey found the overwhelming majority of respondents (87%) hold at least one of those beliefs, including karma, which is defined as the belief that a person's action or conduct in this life or lives to come will influence their ultimate destiny.

The survey, conducted in August, has an error margin of 4 percentage points.

known to have a normal distribution with a mean of 90 minutes and a standard deviation of 18 minutes. A candidate is automatically hired if he or she learns the computer system in less than 100 minutes. A cut-off time is set at the slowest 10% of the learning distribution. Anyone slower than this cut-off time is not hired.

7. What is the cut-off time the market research company uses?

a. 1 hour and 7 minutes
 b. 1 hour and 53 minutes
 c. 2 hours
 d. 2 hours and 8 minutes

1.a
 2.b
 3.c
 4.d

QUESTION 5
 Please submit the answer of question 5 on Quiz

A state official wants to know which party the voters in his state feel is best qualified to lead the country over the next 10 years. He mails a questionnaire on this subject to a SRS of 1600 voters in his state. His staff reports that 325 questionnaires have been returned, of these 241 respondents feel the Democratic Party is best qualified to lead the country over the next 10 years.

8. The population is

a. the 1600 voters receiving the questionnaire.
 b. the 325 questionnaires returned.
 c. the 241 voters who feel the Democratic party is best qualified.
 d. the voters in his state.

Handwritten notes and diagram:

Normal distribution curve with mean $\mu = 90$ min and standard deviation $\sigma = 18$. A vertical line marks the cut-off time at 113 minutes. The area to the right of 113 is shaded and labeled "10%".

Calculations:

$$z = \frac{113 - 90}{18} = \frac{23}{18} \approx 1.28$$

From the z-table, $P(Z < 1.28) \approx 0.90$, so $P(Z > 1.28) = 0.10$.

Handwritten calculations for question 7:

$$113 - 60 = 53 \text{ Min}$$

Handwritten calculations for question 8:

$$1 \text{ hr } 53 \text{ Min}$$
